

## Rose Problems and Solutions

### **Blackspot**

Caused by high humidity and rain, usually in spring or early summer prune to healthiest leaves (infected leaves will fall off anyway dispose of waste, not in compost).  
Every 7-10 days use a product for disease control. Refer to list.

### **Powdery Mildew**

Caused by fungus, spores are spread by wind. Powdery mildew occurs when night time humidity is high and daytime relative humidity is low (prune and dispose of waste, not in compost).  
Rose and Shrub Disease control, Insect and Disease Control, or Garden Disease Control.

### **Rust**

Caused by fungi with moisture, wind spreads the fungal spores to leaves (remove infected leaves and dispose of waste, not in compost) spray.

### **Spider Mites**

Webbing and yellow of leaves.  
Use a systemic Insect Killer, Rose and Flower Insect Killer, or Bug-B-gone Garden and Landscape Insect Killer.

### **Japanese Beetles**

Holes in leaves and flowers.  
Use a systemic Insect Killer, Sevin Powder or spray.

### **Stem Cankers**

Yellowish, reddish or brown sunken areas develop on canes caused by fungi during wet or humid weather. Cut out and destroy cankered canes 5 inches below infected area. (do not compost) Disinfect pruners. Spray canes with lime sulphur.

### **Bayer all in one for Roses**

**Bonide**

**Ferti-lome**

**Hi- Yield**

**Garden Tech-Sevin**

God has done great things...The fields and meadows are greening up. The trees are bearing fruit again.~Joel 2:21-22
